REFEREE AID - LIFE PATH CHARACTER GENERATION

This Referee Aid is intended to help Twilight 2000 referees and players become more comfortable with the **Character Creation** process using the Lifepath method.

Start Character Creation

Attributes

Attributes represent your character's basic physical and mental capabilities, and are graded on a rating scale of A-D, with A being the best and D being the worst.
Strength: Muscle power, toughness, and physical endurance
Agility: Body control, speed, and fine motor skills
Intelligence: Perception, intellect, and mental stability
Empathy: Charisma, amiability, and emotional stability

(1) Start with an 18yr old with CUF of D

(2) Choose your nationality

Most players will choose to play as Americans, but you are free to choose whatever nationality you wish! In WWIII, all nations are impacted by the war in some capacity.

Attributes and skill ratings

Skills represent broad fields of expertise acquired over your life, and are rated similar to attributes.
A (D12): Peak human condition.
B (D10): Above average, capable.
C (D8): Average.
D (D6): Feeble or below average.
F (roll only the related attribute die): Untrained.

(3) Roll 2D3 and assign resulting attribute points

All Attributes start at a C rating. Roll two D6 dice. Each die will earn you points to spend on improving your attributes.
1-2: 1pt
3-4: 2pts
5-6: 3pts
Your roll will not yet between 2 and 6 attribute points to distribute. You may drop one attribute from a C to a D to earn 1 additional point. No attribute can be above an A rating. Keep in mind some careers have attribute requirements.

Childhood background and skills - all are found on the 'Childhood' table on pg. 32.

(4) Roll 1D6 for your childhood and choose 1 skill accordingly

Roll 1D6 for a starting specialty

If the Referee allows for it, you may choose your childhood and/or your childhood specialty.

Remember to have fun when learning of your character's **childhood**. Much like in real life, there are ample opportunities to flesh out your character's life and motivations no matter which type of childhood you had.

Specialties

Specialties represent additional expertise in a narrow part of a skill, and can give additional positive modifiers to skill rolls.

War does not break out. Choose a new career (or the same one) for your character's next term.

You character ages and risks suffering injury or aging effects each term except for the first.

(5) Choose a career - military or civilian

Make sure you meet the listed requirements for the given career (pgs. 32-38). If choosing a military career, note your starting rank (pg. 15)

Military rank has only as much meaning in the world of Twilight 2000 as your characters give to it.

(6) Increase 2 skills by one rating, or one skill by 2 ratings

Choose your skills from the list of career skills for your career, or choose from Stamina, Mobility, or Driving. If you didn't already have the skill, it starts at a rating of D. If this is your first term in the military, one of your skill points must go into Ranged Combat (basic training)

(7) Roll for Promotion and specialty

Make an unmodified skill roll for one of the skills you chose in the last step. Success means you were promoted, and can roll 1D6 on the career's specialty table to learn a new specialty. If you roll for a specialty you already know, choose any specialty you want instead. If military, increase your rank one step. If military or intelligence, also increase your CUF one step.

(8) Roll 1D6 for the number of years you've aged this term

Add the result to you character's age.

Roll 1D8 to see if age has an effect

If you roll under the number of terms you've completed, you must reduce an attribute of your choice by one step. Note that you cannot roll under a 1, and thus do not suffer any aging effects after your first term.

(9) Roll 1D8 to see if war breaks out.

If you roll under the number of terms you've completed, war breaks out. Note that you cannot roll under a 1, and thus war cannot break out after your first term.

War breaks out?

War breaks out. Record your character's age.

At War Term information on pg. 39.

(10) Spend one term in an "At War" career

Increase any 2 skills by 1 point each (not one skill but 2 points)

Roll 1D6 for a final specialty (pg. 39)

If the Referee allows for it, you may choose your At War term specialty. If you roll a specialty you already have, reroll.

The Draft

If your final term was spent as a civilian (except Intelligence careers) and your character is not local to the country in your game's setting, then your character was drafted into the war. In this case, one of your two skill choices must be in Ranged Combat unless you already have a rating of D or better in that skill. In addition, you must also roll for your specialty in the "Military" column on page 39. Finally, get your starting gear in accordance with the gear listed under the "Combat Arms" career choice.

(11) Determine your Hit and Stress Capacities

Hit and Stress Capacity represents your character's ability to take physical damage and manage stress.

Hit Capacity = (Str dice + AGI dice) / 4

Stress Capacity = (INT dice + EMP dice) / 4

(12) Determine Unit Morale

Your unit's starting morale is the same as the highest Command skill score of any character in the unit.

(13) Choose your character's Moral Code

Your character's **Moral Code** is a statement capturing your character's morals and values. Acting within your moral code can sometimes get you a +1 modifier to skill rolls. If you betray your moral code, you immediately take 1 pt of Stress damage, but can choose to pick a new moral code after the session. Acting in alignment with your Moral Code can net you XP rewards.

(14) Choose your character's Big Dream

Your character's **Big Dream** represents their core motivation in the world. Acting in alignment with your Big Dream can net you XP rewards.

(15) Choose a buddy

Your character has a personal attachment to one other character. Making a sacrifice for your buddy may get you a +1 modifier to a skill roll. Watching your buddy get injured will cause you mental stress.

(16) Decide how your character met the group

A single sentence or two is enough.

(17) Note your appearance

What does your character look like? Their clothing? Their mannerisms? The more detail the better.

(18) Give your character a name and/or a nickname

Name your character whatever you like. Do they have a handle when using a radio?

(19) Choose your gear

Pick your **Gear** in accordance with the gear list for your final career term before the At-War term. Choose accordingly for your nationality. In addition, you get D6 rations of food, D6 rations of water, and D6 rounds of ammunition to use as currency.

(20) Choose group gear together and possibly a vehicle (pg. 18)

Your group gets to pick gear for the party, as well as possibly roll for a starting vehicle. Information on pg. 18.

(21) Roll 1d6 to determine your starting Rads. pg. 80

Done!

Further Character Development

Experience: During gameplay, you'll have the opportunity to gain experience and spend that experience to improve your character. For more info, see pg. 40.
Increasing CUF: During any session where you successfully roll your CUF, roll your CUF base die. On a result of 1, your CUF increases a step, to a maximum rating of A. Each time your CUF increases, roll your EMP base die; on a success, your Empathy is reduced one step.
Group Morale Changes: After each session, your unit morale may change in accordance with the events in the session. Consult pg. 41.
Other: After each session, you may choose a **new moral code** if you've betrayed your existing code during that session. You may also opt to choose a **new big dream** or choose a **new buddy** (only one at a time) after each session.

Coolness Under Fire (CUF)

Coolness under fire represents how calm and collected your character remains during stressful situations (like combat). It's graded on a rating scale of A-D, just like Attributes. During particularly intense moments of gameplay (such as getting shot at), you will be required to roll dice corresponding to your CUF rating. pg. 16.

Unit Morale

Much like your character's CUF, your party has a morale rating of A-D. This dice rating is controlled by events involving the entire party, and can generally be added to your CUF dice during CUF rolls. pg. 16.

Skills and Skill Rolls

When your character takes an action, grab two dice to make a **Skill Roll**. One represents the dice size of your attribute rating, and the other represents the dice size of your skill rating. Attributes are rated A-D, and skills are rated A-F, with F representing an untrained roll of only the related attribute dice.
If a 6 or higher, or , is rolled on either die, that represents a "**Success**". If you roll a 10 or higher, that counts as *two* successes, meaning that if you roll very lucky, you could potentially net four successes from one skill roll. The results of your roll will often vary based on your number of successes.
Failure to roll a 6 or higher on either dice represents a failure. If you want to try to roll again, often you can "**Push**" a roll (described in detail on p. 45), or the Referee will determine the consequences of your failure.
When multiple members of the party are working together on one task, assign one character the task of handling the **Group Roll**. Others in the party can often "**Help**" that character, which can add positive modifiers to their roll.
Sometimes, your rolls will have **Positive or Negative Modifiers**. These modifiers represent a change in the dice size that you are rolling. A positive modifier raises the dice to the next size up, and a negative one lowers the dice size by one step.
Sometimes you will need to roll an **Opposed Roll** to see which character comes out on top in a given event. An opposed roll (which can sometimes be different skill rolls for different characters) is comprised of you and the other character both rolling for skills. Whichever character ends up with more successes "wins" the scenario.

Skills

Close Combat: This skill encompasses your character's ability to fight both with and without a melee weapon.
Heavy Weapons: This skill determines how proficient your character is with weapons such as machine guns, rocket launchers, ATGMs, vehicle cannons, artillery, etc.
Stamina: Your Stamina represents your character's toughness and endurance.
Driving: Your driving skill determines your ability to perform advanced driving techniques (beyond normal operation of a vehicle) for all manner of wheeled and tracked vehicles. Some specialties apply for specific types of vehicles.
Mobility: This skill is used anytime your character runs fast, jumps, climbs, etc.
Ranged Combat: Ranged Combat is your character's proficiency with small arms of all kinds - pistols, rifles, shotguns, bow and crossbows, etc. Note that machine guns fall under the Heavy Weapons skill.
Recon: Recon allows your character to spot enemies and move stealthily. It plays a heavy part in performing and avoiding ambushes.
Survival: This skill represents your ability to find food and shelter in the wild.
Tech: Tech allows you to repair damaged equipment and scrounge vital parts that your characters come across in their journey. It also allows for the crafting of new items.
Command: Command impacts your ability to rally your team mates and effects your unit morale.
Medical Aid: Medical Aid is used to treat injuries on yourself and others, but mostly others.
Persuasion: Persuasion is your ability to get others to do what you want them to do. It can often be impacted by your bargaining position and your rank.

Encumbrance

Encumbrance in Twilight 2000 is handled in units, with each unit weighing roughly 3kg. Your character's Strength dice size determines the number of units they can carry without being slowed. pg. 19.
