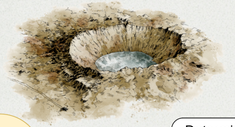
REFEREE AID - STRATEGIC PLAY

Strategic Play for the purpose of this aid is defined as the play that happens on a travel map. Hexes mentioned in this aid represent 10km of real-world distance.



Weather Effects:
Fair Weather - Visibility in darkness is 100m, or 150m with a full moon.
Cloudy - Visibility in darkness is 50m.
Heavy Rain/Snow - Visibility is ~200m in daylight, or 50m in darkness. -1 to all ranged attacks. Requires a Stamina check for marching and gives a -2 to driving rolls. Heavy rain will only last one shift, then automatically revert to cloudy weather for at least one shift. pg. 139.

Interruptions: As long as 3/4 of your shift is spent on your task, you gain the benefits of the task.

Vehicle Maintenance:
During each week that a vehicle has been driven one hex or more on the travel map, a mechanic needs to spend a shift to service it and make a Tech roll. If you don't, or if the roll fails, the reliability rating of the vehicle is decreased one step.

During travel, encounters typically happen about half-way through the shift.

Additional Information:

RADIO RANGE

RANGE IN KM	RANGE IN TRAVEL HEXES
1–5	Same hex only
6–15	Adjacent hex
16–25	Two hexes
Etc.	Etc.

GUN CARE

Every week in which you have used a firearm at least once, you must spend a stretch servicing it and make a TECH roll. If you don't, or the roll fails, its reliability rating drops one step. The Referee can call for gun care after extraordinary exposure of some sort, like moving through water or mud.

Start Shift → Determine time of day, light level, and temperature according to season → Roll for Weather Change → Assign and resolve tasks for each PC. Tasks found in the PM, pgs. 139-149 → Determine Travel distance, if travel occurs, according to movement rate → Draw an Encounter Card. RM - pg. 36 if stationary, otherwise pgs. 39-50. → No Encounter or Encounter Card doesn't meet required criteria → Next Shift

Draw an Encounter Card. RM - pg. 36 if stationary, otherwise pgs. 39-50. → Recon roll success? → Players choose whether to engage or avoid the encounter → Resolve Encounter → Next Shift

Each shift can be 5-10 hours in length at the Referee's discretion, though they are typically around 6 hours during strategic play. There are 4 shifts per day.

More information about light levels in the Players Manual pg. 139.

Shifts
Morning
Day
Evening
Night

Weather Conditions
Fair Weather
Cloudy
Rain/Snow

Roll 1D6. A ✹ means the weather worsens one step. A ◌ means the weather improves one step. pg. 139. After a shift of heavy rain or snow, weather will automatically go back to being Cloudy for at least one shift.

Only one task per PC per shift is allowed, though one character can march AND keep watch during travel. Some tasks can be done by multiple PCs.

Task Examples

Marching	Driving
Gathering	Fuel
Keeping Watch	Fishing
Scrounging	Foraging
Hunting	Making Camp
Cooking	Resting
Sleeping	Exploring

Navigation: When moving in an off-road hex, whether marching or driving, one character must roll Survival. On a failed roll, the party enters a hex other than the one intended. Roll any die - an odd number means the party enters the hex to the left of the target hex; an even number means they enter the hex to the right of the target hex. Maps and Compasses give bonuses to the roll. pg. 140.

Hidden Camp: When players make camp, they can roll Recon to "hide" their camp. While the camp is hidden, encounters will need to roll recon to see if they discover the camp. If they fail, the PCs can choose whether to engage with the encounter or not.

In most regions of the world, Morning and Day are light, but it varies in the far north.

NORDIC LIGHT

SHIFT	SPRING	SUMMER	FALL	WINTER
Morning	Dusk	Light	Dusk	Dark
Day	Light	Light	Light	Dusk
Evening	Dusk	Light	Dusk	Dark
Night	Dark	Dusk	Dark	Dark

Alcohol Fuel: If your vehicle is using alcohol fuel instead of gasoline or diesel, double its consumption rate.

TERRAIN TYPES

TERRAIN	ROAD	OPEN	WOODS	HILLS	MOUNTAINS	LAKE/RIVER	SWAMP	RUINS
SPEED*	x1	x1	x½	x½	x⅓	x1**	x¼	x½
DRIVING	+3	+1	−1	0	−1	+2	−1	0
FORAGING	As terrain	−1	+1	0	−2	–	−1	−2
HUNTING	As terrain	+1	+1	0	−1	0	0	−1
SCROUNGING	+1	–	−1	−1	−2	–	−2	+2
ENCOUNTER DISTANCE (HEXES)	2D10x2***	2D10x4	2D10	2D10x2	2D10x3	2D10x4	2D10x2	2D10

*Applies only to off-road driving (page 140). For marching and on-road driving, the speed factor is always x1.
**Requires boat or amphibious vehicle.
***Minimum distance, use only for roads through woods or ruins.

Marching: When marching on foot, players can travel 2 hexes per shift in road or open terrain. In any other terrain type, players can move only 1 hex per shift.

Forced March: With a successful Stamina roll, characters can march more than 2 shifts in a day. Each player must roll successfully, or risk being left behind. Players may even march a 4th shift in a day, but must roll Stamina with a -2 penalty. A 4th shift of marching will mean that the character becomes sleep deprived.

Driving: Terrain impacts your speed when driving off-road. Half way through any driving shift, make a driving roll. A failure causes a Mishap (pg. 142.) Heavy rain gives a -2 modifier to this roll.
Anytime you change terrain types while driving, make an additional driving roll with the same consequences for failure. Remember, pushing a driving roll can damage your vehicle's reliability rating.

Conditions that Players may suffer from during their travels:

Starving: PCs must eat one ration of food each day. Starvation has several effects:

- You cannot heal damage in any way. You can recover stress normally.
- You suffer 1 point of damage per week. If you are incapacitated by damage while starving, you die after another week without food.
- Once you eat, you are no longer starving, and heal as normal.

Dehydrated: PCs must drink one ration of water per day. Dehydration has several effects:

- You cannot heal damage in any way. You can recover stress normally.
- You take 1 point of damage per day. If you are incapacitated by damage while dehydrated, you die after another day without water.
- Once you drink, you are no longer dehydrated, and can heal as normal.

Sleep Deprived: PCs must sleep at least one shift per day. Sleep deprivation has several effects:

- You cannot heal stress. If you are incapacitated by stress while sleep deprived, you must sleep for one shift before you can heal stress.
- You take one point of stress per day. If incapacitated by stress while sleep deprived, you collapse and sleep for one shift. You cannot be woken during this time.
- Once you sleep for one shift, you are no longer sleep deprived and can heal stress as normal.

Hypothermic: When cold and lacking adequate protection (at Referee's discretion), you must roll Stamina. Protective goods can offer bonuses to the roll. *Ex. On a chill fall day, roll once per day. In winter, you might roll once a shift.* A failed roll leads to Hypothermia. Hypothermia has several effects:

- You immediately suffer 1 damage and 1 stress.
- You cannot heal damage or stress.
- You can even hallucinate - details are at the Referee's discretion.
- You must continue rolling Stamina at the same time interval. Each time you fail the roll, you suffer 1 damage and 1 stress. If you become incapacitated while hypothermic, at the next interval you die.
- Once you have been warmed up, even if just by a campfire, you are able to heal again as normal.

TWILIGHT: 2000
